Norsonic

RELEASE NOTE

NorConnect version 5.1.26.03.26

The new release of NorConnect improve the user defined report fields compatability with invalid entries, as well as several bugfixes.

Bugfixes

- **NorConnect Startup file was not saved** unless both the ”My Measurement” and the ”My Computer” modes of operation had been selected. As a result of this, no NorConnect settings was saved.
- If a **measurement cache file contained an invalid entry**, parsing of that file would stop prematurely, causing some measurements to go undetected. This issue could be triggered by user-defined report fields containing carriage return and line feed (CRLF), which were not handled correctly and could introduce invalid entries in the cache file
- Added further **improvements to the Open and Save** dialogs.
- Support for **conversion of Nor139** nbf files to Nor145/150 format.
